## CHAPTER 14

14.1 The elevation can be determined as
$f(0.8,1.2)=2(0.8) 1.2+1.5(1.2)-1.25(0.8)^{2}-2(1.2)^{2}+5=5.04$
The partial derivatives can be evaluated,
$\frac{\partial f}{\partial x}=2 y-2.5 x=2(1.2)-2.5(0.8)=0.4$
$\frac{\partial f}{\partial y}=2 x+1.5-4 y=2(0.8)+1.5-4(1.2)=-1.7$
which can be used to determine the gradient as $\nabla f=0.4 \mathbf{i}-1.7 \mathbf{j}$. This corresponds to the direction $\theta=\tan ^{-1}(-1.7 / 0.4)=-1.3397$ radians $\left(=-76.76^{\circ}\right)$. This vector can be sketched on a topographical map of the function as shown below:

The slope in this direction can be computed as

$$
\sqrt{0.4^{2}+(-1.7)^{2}}=1.746
$$

14.2 The partial derivatives can be evaluated,

$$
\begin{aligned}
& \frac{\partial f}{\partial x}=2 x=2(2)=4 \\
& \frac{\partial f}{\partial y}=4 y=4(2)=8
\end{aligned}
$$

The angle in the direction of $\boldsymbol{h}$ is

$$
\theta=\tan ^{-1}\left(\frac{3}{2}\right)=0.9828 \text { radians }\left(=56.31^{\circ}\right)
$$

The directional derivative can be computed as

$$
g^{\prime}(0)=4 \cos (0.9828)+8 \sin (0.9828)=8.875
$$

14.3 (a)
$\nabla f=\left\{\begin{array}{l}3 y^{2}+2 y e^{x y} \\ 6 x y+2 x e^{x y}\end{array}\right\} \quad H=\left[\begin{array}{cc}2 y^{2} e^{x y} & 6 y+2 x y e^{x y}+2 e^{x y} \\ 6 y+2 x y e^{x y}+2 e^{x y} & 6 x+2 x^{2} e^{x y}\end{array}\right]$
(b)
$\nabla f=\left\{\begin{array}{l}4 x \\ 2 y \\ 2 z\end{array}\right\} \quad H=\left[\begin{array}{lll}4 & 0 & 0 \\ 0 & 2 & 0 \\ 0 & 0 & 2\end{array}\right]$
(c)
$\nabla f=\left\{\begin{array}{c}\frac{2 x+3 y}{x^{2}+3 x y+2 y^{2}} \\ \frac{3 x+4 y}{x^{2}+3 x y+2 y^{2}}\end{array}\right\} \quad H=\frac{\left[\begin{array}{cc}-2 x^{2}-6 x y-5 y^{2} & -3 x^{2}-8 x y-6 y^{2} \\ -3 x^{2}-8 x y-6 y^{2} & -5 x^{2}-12 x y-8 y^{2}\end{array}\right]}{\left(x^{2}+3 x y+2 y^{2}\right)^{2}}$
14.4 The partial derivatives can be evaluated,
$\frac{\partial f}{\partial x}=-3 x+2.25 y$
$\frac{\partial f}{\partial y}=2.25 x-4 y+1.75$
These can be set to zero to generate the following simultaneous equations

$$
\begin{aligned}
& 3 x-2.25 y=0 \\
& -2.25 x+4 y=1.75
\end{aligned}
$$

which can be solved for $x=0.567568$ and $y=0.756757$, which is the optimal solution.
14.5 The partial derivatives can be evaluated at the initial guesses, $x=1$ and $y=1$,

$$
\begin{aligned}
& \frac{\partial f}{\partial x}=-3 x+2.25 y=-3(1)+2.25(1)=-0.75 \\
& \frac{\partial f}{\partial y}=2.25 x-4 y+1.75=2.25(1)-4(1)+1.75=0
\end{aligned}
$$

PROPRIETARY MATERIAL. © The McGraw-Hill Companies, Inc. All rights reserved. No part of this Manual may be displayed, reproduced or distributed in any form or by any means, without the prior written permission of the publisher, or used beyond the limited distribution to teachers and educators permitted by McGraw-Hill for their individual course preparation. If you are a student using this Manual, you are using it without permission.

Therefore, the search direction is $-0.75 \mathbf{i}$.

$$
f(1-0.75 h, 1)=0.5+0.5625 h-0.84375 h^{2}
$$

This can be differentiated and set equal to zero and solved for $h^{*}=0.33333$. Therefore, the result for the first iteration is $x=1-0.75(0.3333)=0.75$ and $y=1+0(0.3333)=1$.

For the second iteration, the partial derivatives can be evaluated as,

$$
\begin{aligned}
& \frac{\partial f}{\partial x}=-3(0.75)+2.25(1)=0 \\
& \frac{\partial f}{\partial y}=2.25(0.75)-4(1)+1.75=-0.5625
\end{aligned}
$$

Therefore, the search direction is $-0.5625 \mathbf{j}$.

$$
f(0.75,1-0.5625 h)=0.59375+0.316406 h-0.63281 h^{2}
$$

This can be differentiated and set equal to zero and solved for $h^{*}=0.25$. Therefore, the result for the second iteration is $x=0.75+0(0.25)=0.75$ and $y=1+(-0.5625) 0.25=0.859375$.

14.6 The partial derivatives can be evaluated at the initial guesses, $x=1$ and $y=1$,

$$
\begin{aligned}
& \frac{\partial f}{\partial x}=2(x-3)=2(1-3)=-4 \\
& \frac{\partial f}{\partial y}=2(y-2)=2(1-2)=-2
\end{aligned}
$$

PROPRIETARY MATERIAL. © The McGraw-Hill Companies, Inc. All rights reserved. No part of this Manual may be displayed, reproduced or distributed in any form or by any means, without the prior written permission of the publisher, or used beyond the limited distribution to teachers and educators permitted by McGraw-Hill for their individual course preparation. If you are a student using this Manual, you are using it without permission.
$f(1-4 h, 1-2 h)=(1-4 h-3)^{2}+(1-2 h-2)^{2}$
$g(h)=(-4 h-2)^{2}+(-2 h-1)^{2}$

Setting $g^{\prime}(h)=0$ gives $h^{*}=-0.5$. Therefore,
$x=1-4(-0.5)=3$
$y=1-2(-0.5)=2$
Thus, for this special case, the approach converges on the correct answer after a single iteration. This occurs because the function is spherical as shown below. Thus, the gradient for any guess points directly at the solution.

14.7 The partial derivatives can be evaluated at the initial guesses, $x=0$ and $y=0$,

$$
\begin{aligned}
& \frac{\partial f}{\partial x}=4+2 x-8 x^{3}+2 y=4+2(0)-8(0)^{3}+2(0)=4 \\
& \frac{\partial f}{\partial y}=2+2 x-6 y=2+2(0)-6(0)=2 \\
& f(0+4 h, 0+2 h)=20 h+20 h^{2}-512 h^{4} \\
& g^{\prime}(h)=20+40 h-2048 h^{3}
\end{aligned}
$$

The root of this equation can be determined by bisection. Using initial guesses of $h=0$ and 1 yields a root of $h^{*}=0.244$ after 13 iterations with $\varepsilon_{a}=0.05 \%$.

| iteration | $\boldsymbol{h}_{\boldsymbol{l}}$ | $\boldsymbol{h}_{u}$ | $\boldsymbol{h}_{r}$ | $\boldsymbol{g}\left(\boldsymbol{h}_{\boldsymbol{l}}\right)$ | $\boldsymbol{g}\left(\boldsymbol{h}_{\boldsymbol{r}}\right)$ | $\boldsymbol{g}\left(\boldsymbol{h} \boldsymbol{\boldsymbol { h } _ { \boldsymbol { l } }}\right)^{\boldsymbol{g}} \boldsymbol{g}\left(\boldsymbol{h}_{r}\right)$ | $\boldsymbol{\varepsilon}_{\boldsymbol{a}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 0.00000 | 1.00000 | 0.50000 | 20.000 | -216.000 | -4320.00 | $100.00 \%$ |

PROPRIETARY MATERIAL. © The McGraw-Hill Companies, Inc. All rights reserved. No part of this Manual may be displayed, reproduced or distributed in any form or by any means, without the prior written permission of the publisher, or used beyond the limited distribution to teachers and educators permitted by McGraw-Hill for their individual course preparation. If you are a student using this Manual, you are using it without permission.

| 2 | 0.00000 | 0.50000 | 0.25000 | 20.000 | -2.000 | -40.00 | $100.00 \%$ |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 3 | 0.00000 | 0.25000 | 0.12500 | 20.000 | 21.000 | 420.00 | $100.00 \%$ |
| 4 | 0.12500 | 0.25000 | 0.18750 | 21.000 | 14.000 | 294.00 | $33.33 \%$ |
| 5 | 0.18750 | 0.25000 | 0.21875 | 14.000 | 7.313 | 102.38 | $14.29 \%$ |
| 6 | 0.21875 | 0.25000 | 0.23438 | 7.313 | 3.008 | 21.99 | $6.67 \%$ |
| 7 | 0.23438 | 0.25000 | 0.24219 | 3.008 | 0.595 | 1.79 | $3.23 \%$ |
| 8 | 0.24219 | 0.25000 | 0.24609 | 0.595 | -0.680 | -0.40 | $1.59 \%$ |
| 9 | 0.24219 | 0.24609 | 0.24414 | 0.595 | -0.037 | -0.02 | $0.80 \%$ |
| 10 | 0.24219 | 0.24414 | 0.24316 | 0.595 | 0.280 | 0.17 | $0.40 \%$ |
| 11 | 0.24316 | 0.24414 | 0.24365 | 0.280 | 0.122 | 0.03 | $0.20 \%$ |
| 12 | 0.24365 | 0.24414 | 0.24390 | 0.122 | 0.043 | 0.01 | $0.10 \%$ |
| 13 | 0.24390 | 0.24414 | 0.24402 | 0.043 | 0.003 | 0.00 | $0.05 \%$ |

Therefore,

$$
\begin{aligned}
& x=0+4(0.244)=0.976 \\
& y=0+2(0.244)=0.488
\end{aligned}
$$

## 14.8

$$
\begin{aligned}
& \frac{\partial f}{\partial x}=-8+2 x-2 y \\
& \frac{\partial f}{\partial y}=12+8 y-2 x
\end{aligned}
$$

At $x=y=0$,
$\frac{\partial f}{\partial x}=-8$
$\frac{\partial f}{\partial y}=12$
$f(0-8 h, 0+12 h)=g(h)$
$g(h)=832 h^{2}+208 h$
At $g^{\prime}(h)=0, h^{*}=-0.125$.
Therefore,

$$
\begin{aligned}
& x=0-8(-0.125)=1 \\
& y=0+12(-0.125)=-1.5
\end{aligned}
$$

14.9 The following code implements the random search algorithm in VBA. It is set up to solve Prob. 14.7.

```
Option Explicit
```
